PROFESSIONAL SUMMARY

Final-year Computer Science student and full-stack developer with hands-on experience building and shipping web applications using Node.js, React.js, and TypeScript. Proven ability to deliver real-world client projects — POS integrations through internships and active freelancing. Quick learner, comfortable working in remote, fast-paced environments and US business hours.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, NestJS, REST APIs, FastAPI (Python)

Databases: MongoDB, MySQL

Tools & DevOps: Git, GitHub, Postman, Docker, Vercel, Render, Modal.com

AI / Automation: n8n Workflow Automation, AI Agents, Stable Diffusion (inpainting), MediaPipe

Integrations: QuickBooks API, MRPeasy ERP, Cloudinary, Stripe

Platforms: Upwork (currently handling an active project)

WORK EXPERIENCE

Full-Stack Developer — Freelance

Upwork | 2025 – Present | Remote

Currently handling an active client project on Upwork involving full-stack development.

Developed a complete client POS system backend with Node.js and Express.js using a modular REST API architecture.

Integrated QuickBooks API covering Customers, Invoices, Sales Receipts, Estimates, Payments, Credit Memos, and more.

Built MRPeasy ERP inventory module with environment flag controls; designed sync as a silent side-effect that never affects POS response on failure.

Software Engineer Intern — Boolmind

Lahore, Pakistan | Internship

Worked on full-stack web development tasks within a product-focused software company.

Gained hands-on experience with production-level codebases, code reviews, and agile workflows.

Software Engineer Intern — CompuWiz Technologies

Gujrat, Pakistan | Internship

Built and tested web application features under guidance of senior developers.

Developed understanding of the full software development lifecycle and industry best practices.

KEY PROJECTS

NextFit — AI-Powered Virtual Try-On E-Commerce Platform

Final Year Project | React.js, TypeScript, Node.js, Python FastAPI, Stable Diffusion, Modal.com

Designed and built a full-stack e-commerce platform with an AI virtual try-on feature using Stable Diffusion inpainting.

Implemented two try-on modes: real-time live camera overlay using MediaPipe and Canvas, and AI photo-based try-on deployed on Modal.com with T4 GPU.

Managed complete deployment pipeline: React and FastAPI on Vercel, Node.js backend on Render, GPU inference on Modal.com.

Built admin panel, product management system, Cloudinary image storage with auto-deletion, and user authentication flows.

Client POS System — Backend Development

Freelance Project | Node.js, Express.js, MongoDB, QuickBooks API, MRPeasy API

Delivered a complete backend for a point-of-sale system with a modular, scalable REST API structure.

Integrated QuickBooks for real-time accounting sync and MRPeasy ERP for inventory management.

Designed a fault-tolerant architecture where third-party sync failures never block or break the core POS response.

EDUCATION

Bachelor of Science in Computer Science

University of Central Punjab, Gujrat | Expected Graduation: 2026

Final-year student with coursework in Software Engineering, Database Systems, Networks, Compilers, and AI.

Completed Final Year Project (NextFit) demonstrating applied AI, full-stack development, and cloud deployment.
